PowerSchool SIS PowerScheduler: Load Priority

Load priority is the order in which courses will be loaded for a student. Use Load priority to prioritize in which course the system should schedule a student when a conflict between two of the student's requests arises. The lower the number, the higher the priority.

NOTE: The following example is just a recommendation.

1	-	**AP, Honors, Band, Choir**	(Singletons offered once per year, or doubletons offered twice per year)
3	-	**Year-Long Required**	(High priority as yearlong courses need more room in the schedule)
7	-	**Year-Long Electives**	(High priority as yearlong courses need more room in the schedule)
15	-	**Semester Long Required**	
31	-	**Semester Long Electives**	
63	-	**Fluff stuff like Study Hall, Independent Study, etc.**	

Note: On the Preferences tab of the Courses screen, you can enter only a 2-digit Load priority. Use the Update Selections tool to set a 3-digit Load priority.
