

Enterprise Management Service

Enterprise Management Service ("EMS") is a comprehensive solution to manage and maintain your self-hosted PowerSchool environment

Shifts responsibility and operational burden for the technical administration of the PowerSchool SIS from the client to TSG.

Reduces risk by ensuring a secure and reliable disaster recovery strategy via the capture and transfer of data backups for long-term retention and use.

Provides swift and efficient completion of all necessary updates to the application, database, and their underlying infrastructure.

Augments customer resources including staffing, PowerSchool expertise, and information technology aptitude.

Reduces the total cost of ownership of PowerSchool by reducing the staffing necessary to maintain and manage it.

Allows customers to focus their energy, effort, and attention on the use of PowerSchool functionality rather than its technical administration, and therefore, promotes greater capability.

In other words, the use of EMS in conjunction with the PowerSchool Student Information System allows the EMS client to focus on the Student and leaves the Information System to TSG.

To purchase this package or other TSG offerings, please contact your account executive or contact TSG at tsghelpdesk@Pearson.com
